 aqua-dock

Create any
design of
pontoon in
moments

Aqua-dock products are the primary choice for instant pontoons, jetties, floating stages, swimming platforms, bridges, walkways/roads, ramps, flood protection, docks, marinas, dry docks or for any project that needs safe and secure support whether inland or coastal. The configurations and applications are virtually unlimited.

The Aqua-dock modular system has been designed and is manufactured in the UK by experienced engineers with a background of 28 years in extrusion blowmoulding of plastics. Our products provide a highly stable, versatile, cost-effective and complete solution for an instant build of private and commercial pontoons and platforms.

The units are made from a high density polyethylene (HDPE) selected for toughness and durability. These units are then securely linked together using moulded plastic screw fittings. This allows for rapid assembly, the production of an infinite variety of shapes and unrivalled load capacity Aqua-dock is also maintenance free!

 **aqua-dock**

Aqua-dock use fully recyclable food grade materials for all our products ensuring that they will not damage the environment and are always safe to use, even on drinking-water reservoirs.

'I purchased an Aqua-dock system for an 8 metre RIB during March 2010. The product was available from stock and the Aqua-dock team installed the product quickly and efficiently. I am impressed by the modular design of the dock, and particularly the inset roller system which allows the boat to be driven on and off the dock easily, without damage to the hull of the RIB. Equally impressive is the support from the Aqua-dock team, particularly the MD David Howard. David is a real hands on Managing Director who is fully engaged in your project from initial design through to ensuring you are happy with the finished product.'

"Great Product, Great Service"

Ian Richards- Owner 8 Metre Cobra RIB.
